

LK Studio - Application Brief

Overview:

LK Studio is a multi-shop tailor management platform built with Next.js, Prisma, and Tailwind CSS. It supports shop owners and customers in a single PWA-enabled web app.

Key features:

- Shop dashboard, order tracking, measurements, and design catalog management.
- Customer order placement, family measurements, bill view, and price quote tracking.
- OTP/login flows for shop and customer users, shop profile, and bill sharing.
- Uses PostgreSQL/Supabase-style hosting guidance, JWT sessions, and mobile-friendly design.

Deployment notes:

- Production server deploys from main branch and runs on Render.
- Requires JWT_SECRET, DATABASE_URL, S3/R2 upload config, and site URL env vars.
- Play Store app uses Capacitor Android with production server URL and signed AAB release.
